SAM CHAMPS 2009 FREE FLIGHT RULES

General Rules: All models and flights shall be in accordance with the latest AMA and 2006 SAM rules unless otherwise stated. All pertinent AMA Safety Rules covering the model, modeler and support equipment shall be in effect. All models except scale models must bear the entrants identification tag and AMA number. Snuffer tubes are required for DT fuses.

Gas Power: Will be flown with five-minute maxes unless the rules specify some other max, or the Contest Director adjusts max flight times to suit the weather conditions on the day of the contest. In Gas Scale and ½ A Texaco, the longest of three flight times is the contestant's score.

Rubber Power: Towline Glider, Wakefield and Large Rubber models will fly to a 5 minute max; Commercial Rubber and Small Rubber models will fly to a 3 minute max. All Cabin, Wakefield and Commercial Rubber models shall ROG from the ground or a platform not higher than 30 inches. Jimmy Allen models may be hand launched and will fly to a 2 minute max.

Gliders: HL and Catapult Gliders – Best 3 of 9 attempts. Catapult to be 6-inch handle and 9-inch maximum rubber loop (same as AMA rules). Towline gliders can use "golf club" or auto rudder, but no circle tow. Tow line to be 200 feet with flag near tow hook/loop. Contest Management will supply a 200 foot long high start.

Notes:

1. The three FF Mass Launch events will be flown at 09:00 with a photo shoot prior (i.e., Plan to be ready about 08:50)
2. Compressed Air event will have a mass launch at 0900. That flight shall count as the first flight in a three flight event. There will be a separate award for high time on that first flight.
3. With exception of OT Catapult and OT Hand Launch Glider, each official flight score must be submitted to and recorded at the scorer's tent prior to flying the next official flight. No more than three flight scores in OT Catapult and Hand Launch Glider can be submitted at one time.
4. The Tomboy event will be a fun event flown throughout the week. Fuel is limited to 3 ccs, and the timer must remain within 100 feet of the launch point. Contestant may make as many flights as he chooses. Turn scores in at the end of each day. Scoring will be by each contestant's highest single flight time during the week.
5. **Free Flight Concours:** Any model entered in the Concours events must make one qualifying official flight, certified by a witness during the Champs.
6. **½ A Texaco and ½ A Texaco Scale.** Fuel allotment will be 8 ccs. Best time of three flights is contestant's score.
